SUMMARY

I am a motivated third-year B.Tech CSIT student with a passion for software development and modern web technologies. I have experience building projects like an AI Career Copilot and a mood-based music recommendation website using HTML, CSS, JavaScript, and Python. I continuously enhance my problem-solving skills through Data Structures and Algorithms (DSA) and focus on creating and deploying real-world applications

EXPERIENCE

Frontend Hackathon Participant

DevHack Club

08/2025 - 08/2025

Frontend Battle 2.0

- Engineered a high-performance, responsive user interface using HTML5, CSS3, and JavaScript within a strict 24-hour time limit.
- Collaborated with a team of developers to translate wireframes into functional code, ensuring 100% mobile responsiveness across all device types.
- Optimized frontend logic to handle real-time data updates, improving the overall user experience during the Frontend Battle 2.0 competition.

EDUCATION

B.Tech/B.E. – Information Technology

Trident Academy of Technology (TAT), Bhubaneswar

GPA **8.0** / 10

08/2023 - 05/2027 Bhubaneswar

Higher Secondary (12th)

CHSE Board
Grade - 63%

09/2021 - 03/2023 Odisha

Secondary School (10th)

BSE Board
Grade - 69.17%

04/2020 - 03/2021 Odisha

LANGUAGES

English Proficient ●●●●○

Hindi Native ●●●●●

Odia Native ●●●●●

SKILLS

Coding And Development

Software Services **Python** **SQL**

C++ **HTML** **CSS** **JavaScript**

React.Js **GitHub** **Bootstrap**

PROJECTS

AI Career Copilot

02/2026 - 02/2026

AI-powered web application to assist students

- Architected a full-stack AI web application using Python and Flask that automated career roadmap generation, reducing manual research time by 40%.
- Engineered a dynamic frontend with HTML5, CSS3, and JavaScript, significantly improving user interaction with AI-generated data.
- Integrated advanced AI models via API to process complex user queries and provide real-time, intelligent career suggestions.

Mood-Based Music Recommendation Website

12/2025 - 12/2025

Web application for song recommendations based on mood

- Developed a sentiment-aware music engine by integrating the YouTube API, handling dynamic user-mood inputs with zero latency.
- Designed and deployed a responsive interface using JavaScript to filter content based on real-time sentiment analysis.
